Implementation & Training

The key to Success!

Whilst the GSD software suite offers important tools designed to help professionals achieve their objectives, the ability to use GSD data accurately, consistently and effectively is what will ultimately produce benefits to the business and determine the success of implementing the GSD solution. Professional and focused training is the key element in what we deliver.

Tailored training solutions

We recognize that different companies and even individuals need different levels of training and assistance. GSD therefore offers flexible training programmes which can be tailored to suit the exact needs of you and your personnel.

From a half day internet-based training module to a full on-site program programme lasting several weeks, we are here to help you make the most of your new potential.

Training Challenges

We recognize that companies have many “busy” people and that setting aside time for training can place an additional burden on the business. Our training focuses on transforming “busy” into “effective” and GSD always aims to deliver a rapid and significant Return on Investment.

Web based Training

Where simple solutions are required, or where the appropriate skills and Practitioner accreditation is present, GSD can offer Internet based training modules to educate and assist end users. Reviews and Audits are also available, through Internet interaction or through a comprehensive on-site or remote review of your GSD data.

On Site Training

Where a full understanding of the principles of GSD is required and where the GSD solution represents a transformation or “Sea Change” for the business, onsite training is a must. Our Training & Productivity Consultants have years of experience in establishing and supporting GSD in live manufacturing environments

The GSD Solution

Training elements include...

- *GSD Practitioner training & certification*
- *GSD Software training & data design*
- *Practical application*
- *GSD Practitioner review & data audit*
- *Industrial Engineering courses*

The GSD Standard Training Elements

GSD Practitioner Training & Accreditation

The GSD Practitioner training program includes theoretical and practical implementation of the system and is essential for all users of GSD Enterprise. This is a formal on-site course for a maximum of eight people with an examination at the end to certify that the user is a registered and authorized "GSD Practitioner" – an internationally recognized qualification. This 5 day course guides the student through the various levels and applications of the GSD Predetermined Time Standard (PTS) system. It includes a detailed analysis of the system and practical visualization exercises which have been carefully structured to aid the student in the interpretation of the GSD codes

Software Training & Data Design

GSD Enterprise software training is designed to guide newly qualified GSD Practitioners through the user interface and features of the Enterprise software, allowing the GSD Practitioner to combine the accuracy and consistency of GSD methodology with the speed of the comprehensive GSD Enterprise software application. The 5 day course also includes instruction and guidance on building a unique customized database for the company which reflects the manufacturing environment, product and style categorization as well as available equipment – all key factors in the construction of a meaningful and comprehensive database..

GSD Practical Application

GSD Practical Application takes GSD Practitioners into the factory where, under our guidance, they to apply their newly learned skills in a working environment. One or more core styles are analysed by the GSD team and this forms the foundation for the new GSD database. The data is then audited at GSD to ensure compliance and conformity and provides a reliable reference for the team going forward. Next GSD is used for "proof of concept" for method improvement and costs savings, which in turn demonstrates a tangible and significant Return on Investment.

Other training solutions

GSD also offers half day Web based training, practitioner review, data audits and Industrial Engineering training. For more information on any aspect of our training program please contact gsd@gsdhq.com
